TITLE	Health Manpower: A County and Metropolitan Area Data Book.
INSTITUTION	National Center for Health Statistics (DHEW), Rockville, Md.
REPORT NO	PHS-Pub-2044
PUB DATE	Jun 71
NOTE	170p.
AVAILABLE FROM	Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402 (GPO S/N 1722-0166, $1.75)
EDRS PRICE	MF-$0.65 HC-$6.58
DESCRIPTORS	*Directories; *Geographic Distribution; *Health Personnel; Income; *Population Distribution; Population Growth

ABSTRACT

Collected through national surveys and from secondary sources, this publication provides information on the geographic distribution of the following selected health personnel: (1) pharmacists, (2) registered nurses, (3) dentists, (4) physicians, (5) podiatrists, and (6) veterinarians. Data are presented in tables reflecting selected health personnel, population, and effective buying income by state, standard metropolitan statistical area, county, and county group within the state for 1966-1968. Generally, health personnel in the selected categories have shown an increase in the years since 1962. Decreases in the ratios of pharmacists, nurses, and physicians to population were evident in the western region. The ratios of dentists and pharmacists also decreased in the northeastern region, although this region continued to maintain the highest ratio of personnel to population. (SB)

This report contains data for the United States on the distribution of pharmacists and registered nurses in 1966, physicians and dentists in 1967, and podiatrists and veterinarians in 1968 by State, standard metropolitan statistical area, county group within State, and county. Data also include the distribution of population in 1966 and effective buying income in 1966 and 1967.

HEALTH MANPOWER

A COUNTY AND METROPOLITAN AREA DATA BOOK

Paula A. Stewart, M.P.H., *Division of Health Resources Statistics*

INTRODUCTION

This volume is one of a three-part series containing State and county information on health manpower and health facilities. Entitled *Health Manpower: A County and Metropolitan Area Data Book*, it provides information on the geographic distribution of the following selected health personnel:

Year	Health personnel	Number of persons
1966	Pharmacists	131,961
1966	Registered Nurses	909,131
1967	Dentists	106,680
1967	Physicians, M.D.	301,192
1967	Physicians, D.O.	13,415
1968	Podiatrists	7,970
1968	Veterinarians	25,648

These health personnel account for about half of the three million persons in specific occupations recognized as being in the health field. The tables present data by State, standard metropolitan statistical area (SMSA), county group within State, and county.

The other two volumes in the series are entitled *Hospitals: A County and Metropolitan Area Data Book* (PHS Pub. No. 2043, Sec. 1) and *Nursing Homes: A County and Metropolitan Area Data Book* (PHS Pub. No. 2043, Sec. 2.).

The Division of Health Resources Statistics in the National Center for Health Statistics (NCHS) collects data on health manpower through national surveys and from secondary sources. Both data sources were used to obtain the geographic distributions presented in this report.

These distributions were developed from the mailing addresses obtained for the seven occupations covered. As such, the distributions of physicians (Doctors of Medicine and Doctors of Osteopathy), dentists, podiatrists, and veterinarians primarily reflect the location of their offices, while the distributions of nurses and pharmacists reflect their places of residence. Selection of the categories of health personnel was largely determined by the availability of mailing address information.

Comparable data for 1962 were presented for eight health occupations in *Health Manpower Source Book 19*[1] published by the Division of Public Health Methods and the National Center for Health Statistics. The eight occupations included in Source Book 19 were physicians (M.D. and D.O.), dentists, registered nurses, pharmacists, sanitarians, sanitary engineers, and veterinarians.

The regional statistics shown in table A reflect changes that have occurred since 1962 in the distribution of physicians (M.D. and D.O.), dentists, nurses, pharmacists, and veterinarians. Generally, health personnel in these categories showed an increase between 1962 and the current data. Decreases in the ratios of pharmacists, nurses, and physicians to population were evident in the West. The ratios of dentists and pharmacists to population also decreased in the

Table A. Selected health personnel per 100,000 population, by geographic region, United States: 1962 and 1966-68

Geographic region	Total number of health personnel per 100,000 population											
	Pharmacists		Registered nurses		Dentists		Physicians (M.D. and D.O.)		Veterinarians		Podiatrists	
	1962	1966	1962	1966	1962	1967	1962	1967	1962	1968	1962	1968

Northeast, although the Northeast region continued to maintain the highest ratio of personnel to population.

SOURCES OF DATA

The counts of personnel, population, and effective buying income shown in the tables are based on the specific sources indicated below. All counts are for the United States and include Federal and non-Federal health personnel, except counts of dentists which are for non-Federal personnel only.

In table 1 for the United States and each State, counts of pharmacists, registered nurses, and physicians (D.O.) have been adjusted for nonresponse by proportional allocation. In proportional allocation it is assumed that nonrespondents have the same characteristics and geographical distribution as respondents. Thus, the proportion of personnel reporting activity status who were active was applied to the number who did not report activity status to allocate this latter group to active and inactive status, i.e., since 89 percent of the pharmacists reporting activity status were active, this proportion was applied to 2,123 who did not report activity status yielding 1,889 who were then assumed to be active. The same procedure was followed to allocate personnel to States in table 3.

No county counts were adjusted.

Pharmacists.—The 1966 pharmacy manpower survey[3] was conducted by the National Association of Boards of Pharmacy (NABP) in cooperation with the National Center for Health Statistics (NCHS). The State boards of pharmacy included a questionnaire with the licensing renewal form sent to each pharmacist at the appropriate renewal time between October 1965 and September 1967. Most of the questionnaires were sent during calendar year 1966. The 154,110 completed questionnaires were then processed and duplicate records of pharmacists licensed in more than one State were removed.

The total number of pharmacists thus obtained was 122,958, including 13,245 inactive pharmacists and 2,123 who did not report activity status. The county counts were developed from these data and include about 2,000 pharmacists who were Federal employees.

The counts of active pharmacists in the United States and each State were adjusted for those who did not report activity status (of the 2,123 in this group 1,889 were assumed to be active). In addition counts for both total and active pharmacists were then adjusted to include an estimated 9,000 pharmacists who did not respond to the survey, thus the total count was adjusted to 131,961, as reported by the NABP for January 1, 1967.[2]

In this report, pharmacists who did not report activity status were proportionally allocated to active and inactive status based on the 1966 NCHS pharmacy manpower survey.[3] Therefore, the adjusted U.S. count of active pharmacists was 117,495 which was 3,987 less than the 121,482 reported by the NABP for January 1, 1967.[2] In the NABP report[2] which was based on reports from the State licensing boards, all pharmacists whose activity status was unknown were assumed to be active.

There are also differences in the unadjusted counts of pharmacists in this report and those published in the pharmacy manpower survey report, *Pharmacy Manpower*[3], since different methods of removing duplicate records were employed. For the present report, duplicate records of pharmacists licensed in more than one State were deleted by matching social security number, name, and year of birth, leaving 122,958 pharmacists. For the survey report[3], all pharmacists who resided outside of the State in which they were licensed were deleted, leaving 115,583 pharmacists. The latter is the procedure the NABP also uses for their annual statistics.

Registered Nurses.—The 1966 Inventory of Registered Nurses was conducted by the American Nurses' Association (ANA), under contract with the Public Health Service. The State boards of nursing included a uniform set of questions on the license application sent to each nurse at the appropriate renewal time, between September 1965 and November 1966. The questions covered employment status, age, marital status, educational preparation, employment setting, and clinical practice area. The completed license applications were then processed according to ANA specifications and duplicate licenses were removed. The results of this Inventory were published by the ANA in *R.N.'s 1966, An Inventory of Registered Nurses.*[4]

The distributions of nurses presented in this report were developed from the Inventory data received as punched cards from the ANA and include 906,015 Federal and non-Federal nurses. All total counts were proportionally adjusted to include 3,116 nurses whose State of residence was unknown. All active counts were then obtained by subtracting the estimated numbers of inactive nurses as reported by the ANA from the totals. The total ANA count of 909,131 registered nurses includes 593,694 active nurses, 285,791 inactive nurses and 29,646 who did not report activity status. Of the latter group, the ANA assumed 19,494 were active.

In this report nurses are allocated to States by their mailing addresses, a procedure that primarily reflects State of residence. The State counts thus obtained differ from those published by the ANA, since the ANA distributed active nurses by State of employment and inactive nurses by State of residence. For purposes of computing State nurse supply, the active totals by State of employment should be used. See table B for both State distributions.

Where large cities are located close to a State border, nurses frequently live in one State and work in another. For example, the District of Columbia has nearly 1,700 more active nurses when the allocation procedure is by State of employment instead of State of mailing address.

State counts also change when nurses use permanent mailing addresses that reflect neither residence nor employment. For example, Alaska has fewer active nurses when the allocation procedure is by mailing address rather than employment.

Dentists.—The *American Dental Directory*[5] was used to summarize the location of non-Federal dentists.[6] The counts of dentists are as of December 31, 1967 and include graduates for academic year 1966-67. The total count of 106,680 dentists includes about 13,500 inactive dentists and excludes about 8,000 Federal dentists.

Physicians (M.D.).—Two summary computer tapes showing the location of physicians as of December 31, 1967 were obtained from the American Medical Association (AMA). These summary tapes were used to produce the M.D. county counts for both Federal and non-Federal physicians. Since the AMA does not show data for all of the independent cities in Virginia, the 1967 American Medical Directory[7] was used to produce the city counts. The counts include members and nonmembers of the Association.

Table B. Location of registered nurses according to activity status, by employment or residence, and by mailing address: United States, 1966

State	Total R.N.'s		Active R.N.'s[3]	
	By employment or residence[1]	By mailing address[2]	By employment	By mailing address[4]
United States	909,131	909,131	613,188	613,188
Alabama	8,239	8,180	5,912	5,853

Maryland	15,250	15,852	10,005	10,607
Massachusetts	45,731	45,699	28,743	28,711
Michigan	37,515	37,664	23,441	23,590
Minnesota	18,434	18,520	14,441	14,527
Mississippi	4,663	4,650	3,670	3,657
Missouri	14,566	14,090	11,291	10,815
Montana	3,404	3,417	2,483	2,496
Nebraska	7,308	7,322	4,730	4,744
Nevada	1,533	1,523	1,060	1,050
New Hampshire	5,402	5,539	3,521	3,658
New Jersey	42,479	43,776	24,942	26,239
New Mexico	3,619	3,562	2,511	2,454
New York	110,495	109,022	74,280	72,807
North Carolina	15,627	15,663	12,126	12,162
North Dakota	2,889	2,822	2,114	2,047
Ohio	45,572	45,547	32,649	32,624
Oklahoma	6,582	6,526	4,650	4,594
Oregon	9,303	9,254	6,814	6,765
Pennsylvania	75,353	77,988	45,809	48,444
Rhode Island	5,322	5,234	3,673	3,585
South Carolina	7,635	7,754	5,625	5,744
South Dakota	2,907	2,938	2,089	2,120
Tennessee	9,427	9,377	6,755	6,705
Texas	30,468	30,185	20,167	19,884
Utah	3,531	3,513	2,347	2,329
Vermont	2,813	2,909	1,836	1,932
Virginia	16,508	16,973	11,511	11,976
Washington	17,850	17,965	11,361	11,476
West Virginia	6,010	5,982	4,707	4,679
Wisconsin	17,623	17,695	14,084	14,156
Wyoming	1,621	1,617	1,209	1,205

[1] Active nurses are distributed by State of employment; inactive nurses by State of residence.

[2] All nurses (active and inactive) are distributed by mailing address which primarily reflects State of residence. The total counts have been proportionally adjusted for approximately 3,000 nurses whose State of residence was unknown.

[3] Adjusted for activity status not reported.

[4] Counts have been adjusted by subtracting the number of inactive counts estimated by the ANA from the adjusted totals.

Source: Marshall, E.D., and Moses, E.B., R.N.'s, 1966: An Inventory of Registered Nurses. New York. American Nurses' Association, 1969.

The total and active counts exclude 5,729 active and 49 inactive physicians in the U.S. possessions and 1,660 physicians whose addresses were unknown to the AMA. The total count of 301,192 includes 24,015 Federal, 264,328 active non-Federal, and 12,849 inactive physicians.

County data from this report can be made comparable to the AMA's ***Distribution of Physicians, Hospitals, and Hospital Beds in the U.S., 1967***[8] by adding the independent city counts to their respective counties, (see page 6). For SMSA data it will also be necessary to add Tolland County to Hartford, Connecticut SMSA, and Newport County to Providence, Rhode Island SMSA.

Physicians (D.O.).—The American Osteopathic Association[9] provided punched cards on individual physicians as of December 31, 1967, with address changes through May 1968. These cards were used to produce the D.O. county counts for both Federal and non-Federal physicians. The counts include members and nonmembers of the Association. The total count of 13,415 includes 172 Federal and 11,209 active non-Federal physicians, 1,300 inactive physicians, and 734 who did not report activity status. Of the latter group, 659 were allocated to active status, bringing the total count of active physicians to 12,040.

Podiatrists.—The American Podiatry Association supplied unpublished State licensing lists to be used for the 1970 NCHS Podiatry Manpower Survey. These lists covered new licenses and renewals for the appropriate renewal period between the fall of 1967 and the spring of 1969. Graduates for academic years 1967-68 and 1968-69 were added to the lists. About 1,000 duplicate records were removed from the lists before the survey was undertaken. After the survey was completed, county counts for 1968 were obtained by removing additional duplicates, graduates for academic year 1968-69, those out-of-scope, and those deceased prior to December 31, 1968. These county counts include Federal and non-Federal podiatrists.

The total count of 7,970 includes approximately 7,000 active podiatrists with fewer than 100 in the military or other Federal service. This total count for 1968 compares favorably with the count of 8,050 obtained from the podiatry survey which was conducted from January through March 1970. The estimate of 8,200 podiatrists in 1968 published in *Health Resources Statistics*[10] was made prior to this survey and was based on the orginial State licensing lists with identifiable duplicates removed. After the survey was completed, additional duplicates, deaths, and those out-of-scope were deleted, reducing the number to 7,970.

Veterinarians.—The American Veterinary Medical Association provided punched cards on individual veterinarians as of July 1, 1968.[11] The counts of veterinarians developed from these cards exclude graduates for academic year 1967-68. The total count of 25,648 includes approximately 3,000 Federal, 22,000 active non-Federal, and 600 inactive veterinarians.

Population.—Estimates of the total resident population of counties as of July 1, 1966 were obtained from the Bureau of the Census.[12] These estimates are for the civilian resident population plus members of the Armed Forces stationed in the area. Since the Bureau of the Census did not provide separate population estimates for all counties and independent cities, these estimates were made by proportional allocation based on estimates from Sales Management Corporation[13] and the Bureau of Population and Economic Research, University of Virginia.[14] Individual estimates were thus obtained for the counties of Chattahoochee in Georgia; Grayson, Virginia; Menominee, Wisconsin; and Yellowstone National Park, Wyoming; and for these independent cities in Virginia: Charlottesville, Clifton Forge, Covington, Fairfax, Falls Church, Franklin, Galax, Harrisonburg, Lexington, South Boston, and Williamsburg.

Effective buying income.—Market Statistics, Inc., research consultants to Sales Management Corporation, provided punched cards containing estimates of effective buying income for counties for 1966 and 1967. Additional effective buying incomes for some independent cities were obtained from the June 10, 1967, and the June 10, 1968 issues of ***Sales Management, the Marketing Magazine.***[13] Effective buying income is defined as the income individuals receive in the form of wages, salaries, profits, and property income minus all tax payments to Federal, State, and local governments. All effective buying income data are from the *Sales Management Survey of Buying Power,* copyrights 1967 and 1968, and further reproduction is prohibited.

INDEPENDENT CITIES

The 3,114 counties listed in this report include 37 independent cities as of July 1, 1967, 35 in Virginia, 1 in Maryland, and 1 in Missouri. Since that date 3 more cities in Virginia have become independent. These are Bedford City, which is included in Bedford County, Emporia in Greensville County, and Salem in Roanoke County.

The 35 independent cities in Virginia included in this report and the counties from which they were separated for population or buying income data are listed in table C.

The remaining independent cities, Baltimore, Maryland, and Saint Louis, Missouri, are conventionally treated separately since they were never part of any county.

COUNTY ALLOCATION PROCEDURES

A combination of two methods was used to allocate individuals to counties and independent cities. All county counts, except physician (M.D.), were developed according to one or both of the methods described below. The M.D. county counts were developed by the AMA. Counts of M.D.'s in five independent cities in Virginia were developed by the NCHS using the AMA Directory[7] and both of the methods described.

The primary method of allocating individuals to counties was to match their State codes and their mailing address ZIP codes with those on the Post Office (PO) tape, and to use the corresponding county name indicated on the PO tape. For this method, the Post Office Department supplied a computer tape containing the ZIP code, city name, county, and State for each ZIP code listed in the *1967 National ZIP Code Directory.*[15] The tape also contained data identifying major post offices in the United States.

Table C. Independent cities and the counties from which they were separated for population or buying income data: Virginia, 1967

Independent City	County	Independent City	County
Alexandria	Arlington	Lexington	Rockbridge
Bristol	Washington	Lynchburg	Campbell
Buena Vista	Rockbridge	Martinsville	Henry
Charlottesville	Albemarle	Newport News	Newport News[2]
Chesapeake	Norfolk	Norfolk	Norfolk
Clifton Forge	Alleghany	Norton	Wise
Colonial Heights[1]	Prince George	Petersburg	Dinwiddie
Covington	Alleghany	Portsmouth	Norfolk
Danville	Pittsylvania	Radford	Montgomery
Fairfax	Fairfax	Richmond	Henrico
Falls Church	Fairfax	Roanoke	Roanoke
Franklin	Southampton	South Boston	Halifax
Fredericksburg	Spotsylvania	Staunton	Augusta
Galax	Carroll and Grayson	Suffolk	Nansemond
Hampton	Newport News[2]	Virginia Beach	Princess Anne
Harrisonburg	Rockingham	Waynesboro	Augusta
Hopewell	Prince George	Williamsburg	James City
		Winchester	Frederick

[1] Counts of M.D.'s were separated from Chesterfield County, the county from which Colonial Heights originated.
[2] Independent city.

Since this Post Office (PO) tape contained ZIP codes which crossed both State and county lines, corrections were needed to make the tape useable. Where ZIP codes crossed State lines, the PO tape carried cross references in the county field instead of the correct county name. For example, for the District of Columbia, ZIP code 20015 had the entry Montgomery County, Md., and for Maryland the ZIP code 20015 had Washington, D.C. as the county entry. These were changed to reflect the correct county in each State.

The PO tape also contained ZIP codes which crossed county lines. Where these were identified the procedures were as follows:

1. When two post offices in different counties shared the same ZIP code, the code was assigned to the county containing the major post office. For example, ZIP code 35952 in Alabama was shared by a main post office in Etowah County and a branch post office in Blount County. Since the major post office was in Etowah County, the tape was changed to reflect that county for both entries.
2. When three or more post offices in different counties shared a ZIP code, the code was assigned to the county which appeared most frequently for the ZIP code. For example, ZIP code 23219 in Virginia was shared by four post offices, three in Richmond City, and one in Chesterfield County. The county entry was changed to Richmond City for the one post office in Chesterfield County.

In addition to correcting the PO tape it was also necessary to manually ZIP code over 300,000 health personnel address records. When these records were ZIP coded and the PO tape corrections were completed, personnel were allocated to counties by ZIP code.

Since all ZIP codes in use in the United States were not on the PO tape, many records could not be matched by ZIP code. A second method was then used to allocate this group to the appropriate county. The city was matched against the 1966 issue of *Geographical Location Codes*[16] published by the General Services Administration, and the corresponding county name was taken. This publication lists city name and the county in which it is located for about 30,000 cities in the United States. The second method was only used for cities that were located in one county.

A number of problems are inherent in allocating individuals to county by mailing address. By the ZIP code method, individuals are allocated to the county in which the post office is located which is not necessarily the county in which they practice or reside. Post offices situated on county lines may well serve more than one county. This problem may have its greatest effect on the county distributions in multi-county cities.

Another problem relates to the mailing addresses given by the health personnel for their licenses. Physicians (M.D. and D.O.), dentists, podiatrists, and veterinarians tend to give their office addresses, while nurses and pharmacists tend to give home addresses. The effect of using the office and home addresses by the different groups can be seen clearly in Washington, D.C. and its suburban area statistics.

A second part of this problem is the practice of giving permanent mailing addresses for license renewal by some individuals who are in military or other Federal service, or in temporary positions. These individuals are counted as if they resided in the State and county of their permanent mailing address.

STANDARD METROPOLITAN STATISTICAL AREA

As defined here, a standard metropolitan statistical area (SMSA) is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more, or two contiguous cities with a combined population of at least 50,000. In New England, however, SMSA's consist of towns and cities, rather than counties. Since town and city information is not available, the SMSA's in New England have been replaced by the metropolitan State economic areas, which are defined in terms of whole counties. Where no metropolitan State economic area exists, the

Table D. Definition of New England SMSA's as used in this report

SMSA	State economic area
Boston, Mass.	Massachusetts State Economic Area C includes Boston, Lawrence-Haverhill, and Lowell SMSA's.
Bridgeport, Conn.	Connecticut State Economic Area A includes Bridgeport, Stamford, and Norwalk SMSA's.
Brockton, Mass.	Massachusetts State Economic Area D.
Hartford, Conn.	Connecticut State Economic Area C includes Hartford and New Britain SMSA's.
Lewiston-Auburn, Maine	No metropolitan State economic area, Androscoggin County is nearest equivalent to SMSA.
Manchester, N.H.	New Hampshire State Economic Area A.
New Bedford, Mass.	Massachusetts State Economic Area E includes New Bedford and Fall River SMSA's.
New Haven, Conn.	Connecticut State Economic Area B includes New Haven, Waterbury, and Meriden SMSA's.
New London-Groton-Norwich, Conn.	No metropolitan State economic area, New London County is nearest equivalent to SMSA.
Pittsfield, Mass.	Massachusetts State Economic Area F.
Portland, Maine	Maine State Economic Area A.
Providence-Pawtucket-Warwick, R.I.	Rhode Island State Economic Area A.
Springfield-Chicopee-Holyoke, Mass.	Massachusetts State Economic Area A.
Worcester, Mass.	Massachusetts State Economic Area B includes Worcester and Fitchburg-Leominster SMSA's.

Table E. County Group Classification, 1967

County group classification	Definition
9	Counties in SMSA's with over 5,000,000 inhabitants
8	Counties in SMSA's with over 1,000,000 to 5,000,000 inhabitants
7	Counties in SMSA's with over 500,000 to 1,000,000 inhabitants
6	Counties in SMSA's with 50,000 to 500,000 inhabitants
5	Counties considered potential SMSA's
4	Nonmetropolitan counties with over 50,000 inhabitants
3	Nonmetropolitan counties with over 25,000 to 50,000 inhabitants
2	Nonmetropolitan counties with 10,000 to 25,000 inhabitants
1	Nonmetropolitan counties with under 10,000 inhabitants

SMSA has been replaced by the county which most closely approximates it (see table D).

These adjustments reduce the number of SMSA's in the United States from 230 to 221 as of January 1968.[17] See appendix I for the listing of SMSA codes, titles, and counties used in this report.

COUNTY GROUPS WITHIN STATES

The county groups within the States are based on the "Demographic County Classification"[8] developed in 1967 by the Department of Survey Research, American Medical Association. The groupings are defined in table E.

The 79 potential SMSA's in the new Group 5 county classification are considered candidates for future SMSA status. A listing of potential SMSA's and their counties appears in appendix II.

Allocation to each county classification is based on the SMSA definitions as of January 15, 1968, established by the U.S. Office of Management and Budget, and the July 1, 1966, population as estimated by the U.S. Bureau of the Census. All independent cities have been treated as counties.

[1] Metropolitan State economic areas are substituted for SMSA's in New England. See complete title and composition of SMSA's in appendix I.

[2] Includes independent cities.

[3] Data are for non-Federal dentists and Federal and non-Federal pharmacists, nurses, physicians, podiatrists, and veterinarians in the United States distributed by mailing address.

[1] See definition of county groups on page 9.

[2] Data are for non-Federal dentists and Federal and non-Federal pharmacists, nurses, physicians, podiatrists, and veterinarians in the United States distributed by mailing address.

[3] Counts do not add to State totals since not all personnel could be allocated to county. See Sources of Data.

[4] Including 37 independent cities.

[5] Data for County Group 1 included in County Group 3.

[6] Including independent city of Baltimore.

[7] Including independent city of St. Louis.

[8] Including 35 independent cities.

[9] Data for County Group 1 exclude the independent cities of Buena Vista, Clifton Forge, Franklin, Galax, and Lexington, which are included in County Group 2; and Norton and South Boston, which are included in County Group 3. Data for County Group 2 exclude the independent city of Radford, which is included in County Group 3.
